Steps to execute the weather application

1. Ensure you have the Flutter SDK installed on your machine. If you haven't installed it yet, visit the official Flutter website (https://flutter.dev/docs/get-started/install) and follow the installation instructions based on your operating system.

2. Clone the Bj-Weather repository from GitHub using the following command:

   https://github.com/Davryant/dhis2-practical-interview

3. Navigate to the project directory:

   cd dhis2-practical-interview

4. Fetch the dependencies:

   flutter pub get.

5. Connect a physical device or start an emulator

6. Run the app:

   flutter run
